FROM: Everett Hooper, Reclamation Soils Specialist 

RE: White River Shale Oil Corporation, DOE/O47/O16, Uintah  
County, Utah

On August 1, 1985, Tom Munson and Everett Hooper visited an exploration tunnel for oil shale. The tunnel was driven about 25 feet back into the seam. The hole had been covered about 85 percent with boulders but was still accessible.

Any recommendation concerning this exploration tunnel would be to finish covering the opening so that it is completely covered and not considered hazardous.
